

## Hydroponic Growing

- Hydroponic growing media
  - For seeds: Rockwool, Vermiculite, LECA
  - For plant cuttings: water, LECA, perlite, sphagnum moss

Note: LECA needs to be rinsed. (I normally soak for 1 week.)

- Semi Hydroponic Growing (without water circulation) using the Kratky Method.
  - Suspending pot method: water level needs to touch the base of the pot
  - Non-suspending pot method: only fill 1/3 with water
- On-going maintenance:
  - Algae prevention, change of water, PH, beneficial bacteria, use of nutrients and tonic
- How to rescue struggling plants: Humidity, Hydrogen Peroxide
